

EXPERIENCED RECRUITMENT THROUGH CAMPUSES

Streamlining Recruitment Processes with
Technology

OBJECTIVE

- This proposal aims to design and develop a web platform for the "Experienced Recruitment Through Campuses" project.
- The main goal is to create a user-friendly system that helps companies recruit experienced professionals through campus drives.
- The platform will connect job seekers, companies, and educational institutions, providing a central space for collaboration and communication.

Types of Users

1. Company

If you are a company looking to streamline your hiring process with ease, you can post job openings, manage applications, and oversee every step of the hiring journey, all in one convenient location. Simplify your recruitment and find the right talent faster!

Types of Users

2. User

Whether you're a student registering through your college with a coupon code or an independent user, you can easily explore job opportunities and receive notifications regarding the applied jobs through the user module.

Types of Users

3. College

Colleges have the ability to endorse both currently enrolled students and alumni by providing them with coupon codes.

By offering coupon codes, colleges can incentivize participation, foster engagement, and provide additional value to their students and alumni network, ultimately enhancing the recruitment process.

Types of Users

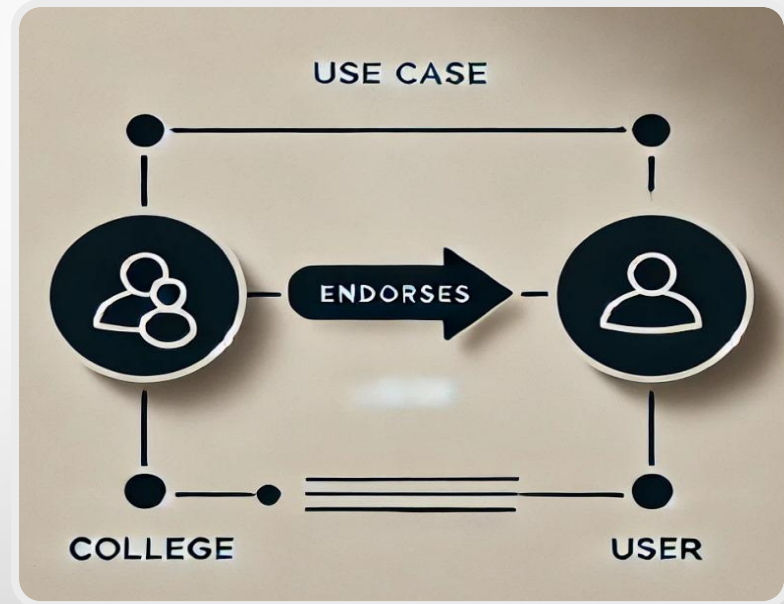

4. Admin

The Admin module is the central management module of the platform, responsible for performing critical tasks such as user application approval, coupon code verification and ensuring the overall integrity of the platform.

This module provides a secure and efficient way for administrators to manage the platform, including database management, real-time analytics and robust security measures to ensure the security and integrity of the platform.

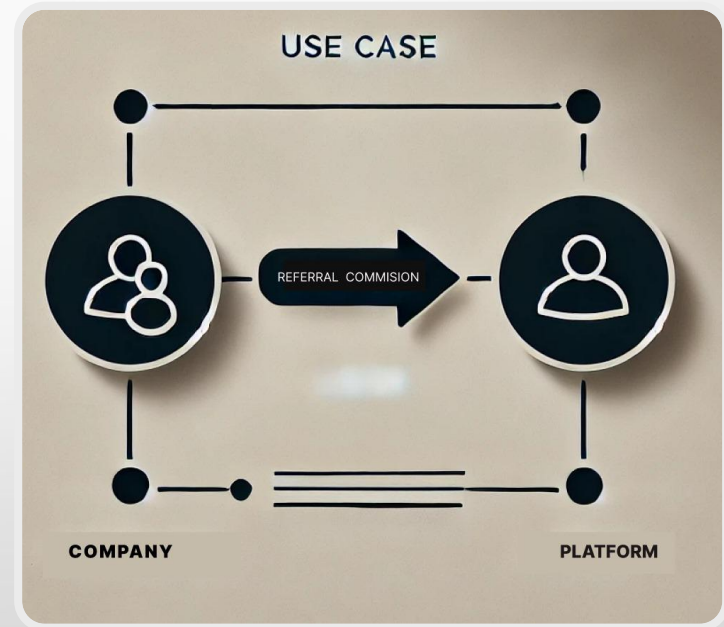

How The System Works

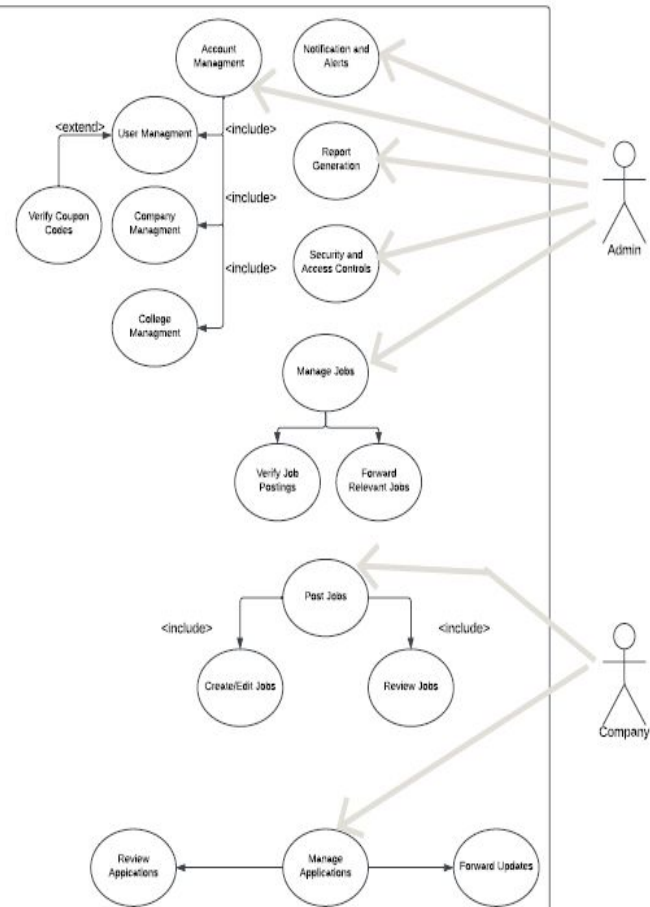

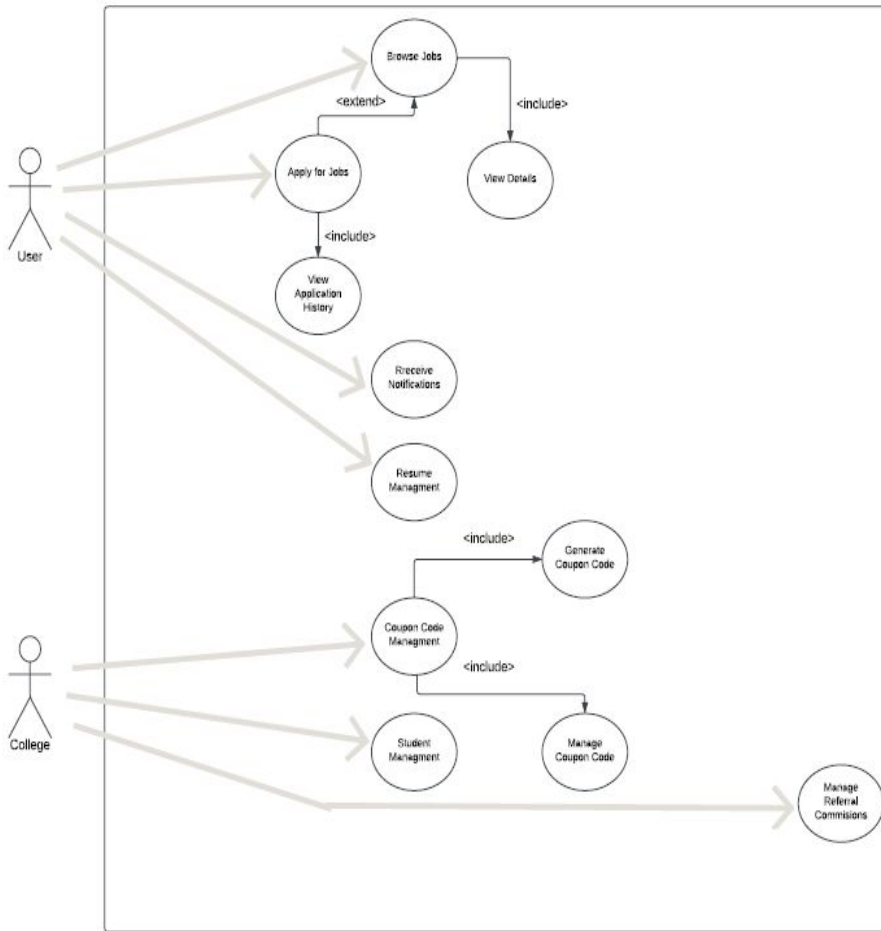

- The admin asks colleges to enroll students into the platform
- The college provides coupon codes to students to endorse them
- Users can either register through college in which case a faculty will endorse them or register directly to the platform

How The System Works

- A company when hiring a candidate, pays a commission to the platform
- If the company hires a candidate endorsed by a college, a percentage of the amount paid will go to the college as referral commission

Conclusion

The "Experienced Recruitment Through Campuses" platform streamlines hiring through technology, offering features like referral commissions and coupon codes for transparency and efficiency.

Its modular design ensures smooth workflows, benefiting colleges, companies, and candidates while shaping a collaborative and innovative approach to campus-based recruitment.
